

Climate Agri-Solutions Fund

Map Guidelines

As part of the application process for the Climate Agri-Solutions Fund, you must attach a map that clearly shows each farm field/plot on which your project activities will take place.

How to create a map for your application

1. Using Google Earth or similar software download or screenshot an aerial image of your farm's field(s)/plot(s).

Example

2. Use computer software or print the map and label:
 - a. Field(s)/Plot(s) where activities will take place
 - b. Waterways
 - c. Buildings
 - d. Fencing
 - e. Other relevant features

Example

Not comfortable using computer software? You can submit a hand drawn map that clearly shows the farm layout with labels of the field(s)/plot(s) where the activities will take place in addition to features like waterways, fences, buildings etc. IAF may verify the accuracy of hand drawn maps.
