

IAF Celebrates Its 10,000th Project

Victoria, BC | January 27, 2026 — IAF is celebrating a major milestone: the completion of its 10,000th project supporting a thriving British Columbia agriculture and food sector.

Since its inception, IAF has partnered with producers, processors, researchers, and industry organizations to invest in projects that strengthen BC agriculture – from advancing on-farm practices to supporting food innovation and sector resilience. Reaching 10,000 projects reflects decades of collaboration, learning, and shared commitment to a thriving agriculture and food sector.

“Behind every project number is a group of people working to move BC agriculture forward,” said Jack DeWit, Chair of the IAF Board of Directors. “This milestone is really about them – the farmers, innovators, and organizations who bring ideas to life and make lasting impact.”

IAF-delivered projects span the province and the value chain, supporting practical solutions, applied research, and knowledge sharing that help the sector adapt and grow. Along the way, IAF has remained focused on collaboration, integrity, and transparency to ensure investments deliver real value.

As IAF marks this achievement, the organization is looking firmly to the future.

“Ten thousand projects is something to celebrate, and a reminder of what’s still possible,” added TJ Schur, CEO of IAF. “We’re excited to keep working with our partners on the next generation of opportunities that will shape the future of agriculture in BC.”

IAF extends its sincere thanks to its funding partners, members, project leaders, and industry collaborators who have made this milestone possible.

About the 10,000th Project

Participant: Bovee Ranching Ltd. | Program: [Climate Agri-Solutions Fund](#) | Project Funding: \$21,875

This project focused on implementing rotational grazing, specifically intensive short-duration grazing. It included the purchase and installation of portable temporary fencing (a Razor Grazer and Power Grazer) to improve pasture health, enhance manure distribution, increase carrying capacity, and reduce soil erosion. Together, these improvements supported a more sustainable and resilient farming operation.

“Being the 10,000th project is not just a milestone for us, but a testament to the IAFs commitment to agriculture, enabling us to enhance both productivity and environmental stewardship.

It’s an honour to be part of IAF-delivered programs driving sustainable change and setting new standards in ranch management.”

--Tammy Bovee, Bovee Ranching Ltd.

This project was funded in part by Agriculture and Agri-Food Canada through the Climate Agri-Solutions Fund delivered by the Investment Agriculture Foundation of BC.
